

WETTER TX IMPROVES CONTROL OF SILVER GRASS (VULPIA SP)

The addition of WETTER TX surfactant to ROUNDUP[®] CT broadacre herbicide or ROUNDUP[®] herbicide improves the control of both annual and perennial grass weeds.

While ROUNDUP provides good control of most grasses, the addition of WETTER TX can increase control of Silver grass (Vulpia sp or Rats' Tail Fescue) and perennial Ryegrass by up to 30% and Yorkshire Fog grass by up to 15% (see table).

Monsanto recommends the addition of WETTER TX at a rate of 200ml/100ml of spray solution to your normal ROUNDUP rate for all pasture renovation situations where annual and/or perennial grasses are present.

WETTER TX is used in addition to a mid range general purpose surfactant. It is not a general purpose surfactant, but it is a specific surfactant. WETTER TX is on the oil end of surfactant chemistry and it breakdowns the wax and fat cuticle of plants, increasing the penetration of ROUNDUP into the plant for improved control.

IMPROVEMENT IN WEED CONTROL BY

ADDING WETTER TX TO ROUNDUP CT

<u>Weed</u>	<u>% improvement with addition of WETTER TX</u>
Annual Ryegrass	+20%
Perennial Ryegrass	+30%
Silver grass	+30%
Yorkshire Fog grass	+15%
Bent grass	+25%
Brome grass	+10%
Phalaris	+ 5%
Squirrel Tail Fescue	+ 8%
